

THE CLAIMS

1.(Original) A system supporting exchange of media, said system comprising:

a first television display in a first home;

a first storage in the first home that stores the media; the first storage supporting consumption of the media by the first television display in the first home, and having an associated first network address;

a second television display in a second home;

a second storage supporting consumption of the media by the second television display in the second home, and having an associated second network address; a communication network; and

server software that receives a request that identifies one of the associated first and second network addresses and responds by identifying the other of the associated first and second network addresses to support delivery via the communication network of the media from the first storage to the second home for consumption by the second television display.

2. (Currently amended) The system of claim 1 wherein the first and second network addresses are one of an Internet protocol (IP) address, a media access control (MAC) address, ~~and~~ or an electronic serial number (ESN).

3. (Currently amended) The system of claim 1 wherein the communication network comprises ~~at least one~~ or more of a cable infrastructure, a satellite network infrastructure, a digital subscriber line (DSL) infrastructure, an Internet infrastructure, an intranet infrastructure, a wired infrastructure, and or a wireless infrastructure.

4. (Original) The system of claim 1 wherein the communication network is the Internet.

5. (Currently amended) The system of claim 1 wherein the media comprises ~~at least~~ one or more of audio, a still image, video, and or data.

6.(Original) The system of claim 1 wherein the media comprises real-time video.

7. (Currently amended) The system of claim 1 wherein consumption comprises ~~at least~~ one or more of playing audio, displaying a still image, displaying video, and or displaying data.

8.(Currently amended) A system supporting exchange of media, said system comprising:

a first storage in a first home that stores the media, and having an associated first protocol address;

a ~~second~~ television display in a second home, and having an associated second protocol address;

set top box circuitry, in the first home, communicatively coupled to deliver the media from the first storage to the ~~second~~ television display for consumption;

a communication network; and

server software that receives a request that identifies one of the associated first and second protocol addresses and responds by identifying the other of the associated first and

second protocol addresses to support delivery via the communication network of the media from the first storage to the second television display for consumption.

9. (Currently amended) The system of claim 8 wherein the media comprises ~~at least~~ one or more of audio, a still image, video, and/or data.

10. (Original) The system of claim 9 wherein the media comprises real-time video.

11. (Currently amended) The system of claim 8 wherein the first and second protocol addresses are one of an Internet protocol (IP) address, a media access control (MAC) address, and or an electronic serial number (ESN).

12. (Currently amended) The system of claim 8 wherein consumption comprises ~~at least~~ one or more of playing audio, displaying a still image, displaying video, and/or displaying data.

13. (Currently amended) The system of claim 8 wherein the communication network comprises ~~at least~~ one or more of a cable infrastructure, a satellite network infrastructure, a digital subscriber line (DSL) infrastructure, an Internet infrastructure, an intranet infrastructure, a wired infrastructure, and/or a wireless infrastructure.

14. (Original) The system of claim 8 wherein the communication network is the Internet.

15.(Original) The system of claim 8 wherein the server software supports anonymous media exchange.

16.(Original) The system of claim 8 wherein the server software forwards media from the first storage to the second television display.

17.(Original) The system of claim 8 wherein the server software is at a location separate from the first home and the second home.

18.(Currently amended) A system supporting exchange of media, said system comprising:

a first storage in a first home that stores the media;

a ~~second~~ television display in a second home;

set top box circuitry, in the first home, communicatively coupled to deliver the media from the first storage to the ~~second~~ television display for consumption;

a closed and secure communication network, wherein the media is delivered from the first storage to the television display via the closed and secure communication network; and

server software that coordinates delivery of the media from the first storage to the set top box circuitry.

19. (Currently amended) The system of claim 18 wherein the media comprises ~~at least one~~ or more of audio, a still image, video, and/or data.

20.(Original) The system of claim 19 wherein the media comprises real-time video.

21.(Currently amended) The system of claim 18 wherein consumption comprises at least one or more of playing audio, displaying a still image, displaying video, and/or displaying data.

22. (Currently amended) The system of claim 18 wherein the communication network comprises ~~at least one~~ or more of a cable infrastructure, a satellite network infrastructure, a digital subscriber line (DSL) infrastructure, an Internet infrastructure, an intranet infrastructure, a wired infrastructure, and/or a wireless infrastructure.

23.(Original) The system of claim 18 wherein the communication network is the Internet.

24.(Original) The system of claim 18 wherein the server software supports anonymous media exchange.

25. (New) A system supporting exchange of media, said system comprising:
set top box circuitry, in a first home, communicatively coupled to deliver the media from a first storage at the first home, to a television display at a second home; and
server software that receives a request that identifies one of an associated first or second network address and responds by identifying the other of the associated first or second network

addresses to support delivery via a communication network of media from the first storage in the first home to the television display in the second home.

26. (New) The system of claim 25 wherein the first and second network addresses are one of an Internet protocol (IP) address, a media access control (MAC) address, or an electronic serial number (ESN).

27. (New) The system of claim 25 wherein the communication network comprises one or more of a cable infrastructure, a satellite network infrastructure, a digital subscriber line (DSL) infrastructure, an Internet infrastructure, an intranet infrastructure, a wired infrastructure, and/or a wireless infrastructure.

28. (New) The system of claim 25 wherein the communication network is the Internet.

29. (New) The system of claim 25 wherein the media comprises one or more of audio, a still image, video, and/or data.

30. (New) The system of claim 25 wherein the media comprises real-time video.

31. (New) The system of claim 25 wherein consumption comprises one or more of playing audio, displaying a still image, displaying video, and/or displaying data.
